

PACKAGE 3 — FULL ARCHITECTURE MODERNIZATION

From N1,000,000

custom quote based on scope

Best for: Enterprises with complex legacy monolithic systems requiring a full rebuild into microservices, cloud-native architecture, and AI-powered operations.

Everything in Package 2 — PLUS:	
All Cloud & DevOps Services	Every service from the N500,000 Cloud Migration package is included
Engage — Enterprise Asset Inventory	
Enterprise System Inventory	Full catalogue of every application, microservice candidate, database, API, and integration across the organization
Stakeholder Alignment Sessions	Cross-functional sessions with engineering, operations, and leadership to align on transformation goals
Technical Debt Quantification	Dollar value assigned to technical debt so leadership understands the true cost of inaction
Transformation Business Case	Formal document making the case for modernization with ROI projections and risk analysis
Assess — Deep Architecture Analysis	
AI Full Codebase Analysis	AI scan of the entire legacy system — every risk, every inefficiency, every dependency surfaced
Architecture Anti-Pattern Report	Identify every design decision that is creating fragility, bottlenecks, or scale limitations
Data Architecture Review	Assess database design, data flow, integrity, and readiness for modernization
Security Threat Modeling	Formal threat modeling of the existing and proposed architecture

Microservices Decomposition Plan	Domain-driven breakdown of the monolith into logical, independently deployable services
Transform — Architecture Rebuild	
Microservices Implementation	Break your monolith into independent, scalable, maintainable services
API Gateway Design	Centralized API management with rate limiting, authentication, and routing
Service Mesh Implementation	Inter-service communication, observability, and traffic management
Event-Driven Architecture	Asynchronous messaging between services for resilience and scale
Kubernetes Orchestration	Production-grade K8s cluster with autoscaling, RBAC, and namespace management
Database Modernization	Migrate legacy databases to modern solutions with database-per-service design
Data Pipeline Setup	ETL pipelines for analytics, reporting, and data warehousing
Transform — AI-Powered Operations	
AI-Powered Monitoring	Intelligent anomaly detection that predicts failures before your users notice
Predictive Scaling	AI-driven infrastructure scaling based on predicted demand patterns
Automated Incident Response	Runbooks triggered automatically when predefined conditions are met
Centralized Observability	Distributed tracing, centralized logging, and custom dashboards across all services
Transform — Advanced Security	
Zero Trust Architecture	Every request authenticated and authorized — no implicit trust inside the network
Penetration Testing	Comprehensive security testing of the modernized system before go-live
Secrets Rotation	Automated rotation of all credentials, certificates, and API keys
SOC 2 Alignment	Security controls aligned with SOC 2 Type II compliance requirements

Client Portal & Revision System	
Dedicated Client Portal	Every phase of the transformation tracked in real time — milestones, previews, and findings
Tracker-Based Continuous Revisions	Submit requests, review changes, and approve milestones directly through the portal
Call & Response System	Every request logged, responded to, and resolved with a full audit trail
Executive Progress Reports	Regular written summaries of progress, outcomes, and next steps for leadership
Delivery, Training & Support	
Delivery Timeline	10 – 20 weeks depending on system complexity and scope
Engineering Team Training	Comprehensive training for your team on the new architecture, tools, and workflows
Architecture Documentation	Full documentation of every design decision, service, API, and integration
Post-Launch Support	90 days of dedicated architecture and infrastructure support after go-live
Quarterly Reviews	Performance, security, and cost optimization reviews every quarter after go-live

Enterprise pricing starts at N1,000,000 and is scoped individually based on system complexity, team size, and timeline. Contact us for a custom quote.
