

PACKAGE 2 — CLOUD MIGRATION & DEVOPS

From N500,000

based on system size and cloud scope

Best for: Growing businesses ready to move to modern cloud infrastructure with automated deployments, real-time monitoring, and containerized environments.

Everything in Package 1 — PLUS:	
All Foundation Services	Every Engage, Assess, and Transform service from Package 1 is included
Engage — Extended Asset Inventory	
Infrastructure Asset Mapping	Full inventory of every server, service, database, and cloud resource in your environment
Cloud Readiness Assessment	Evaluate which workloads are cloud-ready and which need preparation before migration
Migration Risk Register	Document every risk associated with migrating each component — nothing left to chance
Assess — Cloud & DevOps Analysis	
Infrastructure Cost Analysis	Current spend vs projected cloud cost — with optimization recommendations built in
Dependency Mapping	Every service-to-service dependency charted before a single workload moves
Security Posture Review	Full review of current security controls against cloud best practices
Transform — Cloud Migration	
Cloud Provider Setup	Production-grade deployment on AWS, Google Cloud, or Azure

Application Migration	Move your application to the cloud with zero data loss and minimal downtime
CDN Integration	Global content delivery for fast load times regardless of user location
Auto-Scaling Configuration	Infrastructure scales automatically when traffic spikes — no manual intervention
Load Balancing	Traffic distributed across servers for maximum uptime and performance
Infrastructure as Code	All infrastructure defined in Terraform — version-controlled and fully repeatable
Disaster Recovery Plan	Documented failover systems and recovery protocol for every critical component
Cost Optimization	Architecture designed to minimize monthly cloud spend without sacrificing performance
Transform — Full DevOps Pipeline	
CI/CD Pipeline	Automated build, test, and deployment triggered on every code push
Containerization	Docker containers for consistent, predictable environments across all stages
Zero-Downtime Deploys	Rolling deployments with no service interruption
Automated Testing	Unit, integration, and end-to-end tests run automatically on every release
Rollback Capability	Instant rollback to any previous stable version if a release causes issues
Transform — Monitoring & Observability	
Real-Time Monitoring	Live dashboards showing application health, performance, and uptime
Uptime Alerts	Instant notifications the moment any part of your system goes down
Error Tracking	Real-time capture and alerting on all application errors
Performance Metrics	CPU, memory, database, and API response time tracked continuously

Client Portal & Revision System	
Dedicated Client Portal	Every migration phase tracked in real time with milestone updates and previews
Tracker-Based Revisions	Submit change requests through the portal — tracked, responded to, and actioned continuously
Call & Response System	You flag an issue or request, we respond and resolve — full audit trail maintained
Delivery & Support	
Delivery Timeline	6 – 10 weeks depending on system size and cloud scope
Staff Training	Training sessions for your team on the new cloud environment and DevOps workflow
Post-Launch Support	30 days of dedicated cloud and DevOps support after go-live

Not included: Microservices architecture, Kubernetes orchestration, API gateway, database modernization, AI monitoring. Available in Package 3.
